## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of Group II in the reply filed on September 18, 2007 is acknowledged.
2. Claims 1-17,21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on September 18, 2007.

### *Drawings*

3. The drawings are objected to because some of the drawings are difficult to interpret due to the poor lining. Applicant's should consider the use of a bonded draftsman and the submission of **formal drawings (which would make subsequent interpretation easier should the application mature into a patent)**. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each

drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 18-20,22,23 rejected under 35 U.S.C. 103(a) as being unpatentable over the Japanese publication JP 8-144927 in view of Born et al. and Walker '047..

Regarding claims 18-20,22,23 JP '927 shows (as best understood—a translation is not yet available) a motor and pump assembly comprising a rotating shaft 6, a plurality of radial (ball) pistons 9, a cam 10 with followers (part of the piston assembly) high and low pressure ports at 3A,3B.

Lacking is a showing that the device operates both as a motor and pump (although presumably this is the case) and a specific discussion of the first and second valve plates.

Born et al. shows such plates in a similar pump assembly at 88,'88. It would appear that these are at 12 and 14 in JP '927.

Walker is relied upon to show a similar pump assembly to that of the instant invention with which applicant's are well familiar. The basic structural teachings of this references could be applied to JP '927. Note in col. 3 around line 13 Walker states "...the unit has the capability to operate both as a pump and as a motor..."

It would have been obvious to the ordinary skilled worker in the art at the time of the invention to have incorporated the teaching of both Born et al. and Walker '047 into JP '927 for a more efficient pump assembly.
